fission+kuasar

- 创建deployment
 - 为deployment创建pod 20ms
 - scheduler调度 40/50ms
 - 剩下的时间是kubelet拿到pod信息往containerd发送大概300多ms
- run pod 70ms + create container 22 ms + start container 7ms ≈ 100ms

fission+修改后的containerd

run pod 1177ms + pull image
30ms + create container 6 ms + start container 33ms ≈ 1266ms

后续方向

- 优化kubelet与containerd之间的耗时
- 底层支持metrics
